

MAHESH BIRADAR

Senior Software Engineer | Forward Deployed Engineer | Solutions Engineer

Pune, India | +91 7666530679 | mahesh.biradar9702@gmail.com Notice Period: 1 Month

PROFESSIONAL SUMMARY

Senior technical professional with 5+ years of experience in designing, architecting, and deploying enterprise software solutions for international clients. Proven expertise as a Solution Architect leading multi-country product launches, translating business requirements into scalable technical solutions, and serving as the primary technical interface between engineering teams and business stakeholders. Strong background in system integration, API design, backend architecture, and cross-functional stakeholder management across European markets. Actively expanding into AI deployment, agentic workflows, and enterprise automation. Seeking Forward Deployed Engineer, Solutions Engineer, or Solutions Architect roles where technical depth combines with direct client engagement.

CORE COMPETENCIES

Solution Architecture | Multi-Country Product Deployment | Client-Facing Technical Consulting | API Design & Integration | System Architecture | Backend Development | Requirements Analysis | Business-to-Technical Translation | Cross-Functional Team Leadership | Production Debugging & Root Cause Analysis | Agile Delivery | AI Agent Deployment | Workflow Automation | Enterprise Integration

PROFESSIONAL EXPERIENCE

Ridecell India Pvt Ltd · Pune, India

Senior Software Engineer | Solution Architect

March 2021 – Present

Solution Architecture & Multi-Country Deployment Leadership

- Led end-to-end technical delivery of enterprise fleet management platform across 3 European countries as primary technical interface — owning system integration, stakeholder coordination, API architecture, and post-deployment support independently.
- Acted as Solution Architect during international product launches — translating operational requirements from local business teams into technical specifications, system configurations, and integration workflows customized for each market.
- Managed complete deployment lifecycle from discovery through go-live — collaborating with product owners, local operations teams, and cross-functional engineering teams across multiple time zones.
- Conducted structured requirements discovery sessions with international clients to map operational workflows, identify integration touchpoints, and define country-specific solution architectures.

Client-Facing Technical Consulting & Stakeholder Management

- Served as primary technical point of contact for operations stakeholders across UK, Germany, and other European markets — translating between business language and technical implementation.
- Facilitated technical decision-making conversations with non-technical stakeholders, presenting architectural tradeoffs, timelines, and risk assessments to enable informed business decisions.
- Handled challenging stakeholder situations by uncovering underlying business problems behind stated requirements, proposing alternative solutions that better addressed actual needs while managing relationships professionally.

System Architecture, API Integration & Migration

- Redesigned and rearchitected a core platform feature to support new multi-country system architecture — enhancing scalability and performance while maintaining backward compatibility with live deployments.
- Designed and implemented REST API integrations with multiple international third-party suppliers — building structured data exchange contracts, error handling, and retry mechanisms across live production environments.
- Led full microservice database migration from MongoDB to PostgreSQL, designing custom Django management commands for data transfer, integrity validation, automated testing, and zero-downtime deployment.
- Refactored data models to align with new architecture, optimizing database interactions and improving data consistency across all country deployments.

Production Operations, Quality & Team Enablement

- Diagnosed and resolved complex post-launch production issues across live enterprise deployments — conducting root cause analysis and implementing long-term architectural fixes rather than surface-level patches.
- Automated previously manual production remediation processes, reducing operational overhead and improving system reliability across all deployed markets.
- Led QA processes across frontend, backend, and mobile applications following full SDLC lifecycle — managing release cycles, integration testing, and third-party vendor API validation.
- Mentored and trained junior developers on API integration patterns, vendor relationship management, and production debugging — enabling team to scale capacity and handle new strategic initiatives independently.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, Django, Django REST Framework, JavaScript, HTML, CSS
- **Databases:** PostgreSQL, MySQL, MongoDB — schema design, migration, query optimization, ORM
- **API & Integration:** REST API design, third-party API integration, webhook orchestration, API documentation, Postman
- **Architecture:** Microservices, event-driven systems, multi-tenant architecture, distributed systems fundamentals
- **AI & Automation:** AI agent workflow design, prompt engineering, LLM integration, RAG concepts, agentic AI, n8n workflow automation, ElevenLabs Conversational AI
- **DevOps & Tools:** Docker, Git/GitHub, CI/CD basics, Jira, Sumo Logic, Periscope
- **Methodologies:** Agile / Scrum, SDLC, Solution Architecture, Requirements Gathering, Root Cause Analysis

CURRENT FOCUS AREAS

- Enrolled in PG Certificate Program in Forward Deployed AI Engineering — IIT Roorkee (Continuing Education Centre) — covering AI deployment fundamentals, prompt engineering, RAG systems, agentic AI, and production readiness for enterprise AI deployments.
- Hands-on development of AI agent deployment systems — including end-to-end voice AI agents integrating conversational AI platforms, workflow orchestration engines, and third-party APIs with production debugging.
- Actively deepening expertise in enterprise integration, LLM systems, agentic workflows, and client-facing AI deployment methodologies.

EDUCATION

PG Certificate — Forward Deployed AI Engineering — IIT Roorkee CEC (in progress)	2026 – Ongoing
PG Diploma in Advanced Computing — CDAC Sunbeam Infotech, Pune	Feb 2020 – Feb 2021
Bachelor of Engineering — Aeronautical Engineering — Acharya Institute of Technology, Bangalore	Aug 2015 – Jun 2019

AWARDS & RECOGNITION

- 'The Rock' Award — Ridecell: Recognized for exemplary commitment to team functioning and consistent delivery across multi-country deployment cycles.
- Repeated recognition from management and team leads for outstanding debugging skills, analytical problem-solving, and root cause analysis in live enterprise environments.
